Module 1

HTML 5.1

1. Hyperlink Creation:

Create a webpage about your favourite hobby. Include at least three hyperlinks to related websites or resources.

2. Article and Aside Elements:

Design a webpage layout using the `<article>` and `<aside>` elements to showcase a blog post and related advertisements or supplementary content.

3. Form Handling:

Develop a contact form for a website, including fields for name, email, subject, and message. Ensure appropriate input validation.

4. Dialog Box Creation

Implement a dialog box using HTML and CSS for a website's login form. Ensure it is responsive and visually appealing.

5. Styling Practice:

Create a webpage with a navigation menu, header, footer, and content section. Apply CSS styling to enhance the visual presentation.

6. Animated Navigation Menu:

   - Design a navigation menu with CSS animations for hover effects or transitions between menu items.

7. CSS Flexbox Gallery:

   - Build an image gallery using CSS Flexbox for layout, allowing images to dynamically adjust based on screen size.

8. Custom Checkbox and Radio Buttons:

   - Style checkbox and radio input elements with custom CSS to enhance their appearance and user experience.
